

June 9, 2016

To Whom it May Concern,

The California GIS Council is pleased to approve the California Spatial Data Infrastructure Report Card for Geodetic Control. At its June 9th, 2016 meeting the Council discussed the document and voted to support the vision for a high quality statewide geodetic control network, which underlies the accuracy of mapping and geographic analysis statewide.

The Council agrees with the need and value of the development and maintenance of key statewide datasets like geodetic control as part of its purpose to promote a greater understanding and use of the benefits of GIS, and facilitate cooperation throughout the State of California by supporting the collection, acquisition, sharing, and dissemination of GIS data, standards, and policies.

Sincerely,

Mark Greninger
California GIS Council Chair
